

A background image showing a business meeting with several people in suits. One person is holding a pen over a document labeled 'CONTRACT'. Another person is gesturing with their hand. The image is overlaid with a semi-transparent blue circuit board pattern on the left side. The title text is in large, white, bold, sans-serif font.

THE GREAT STAY WHERE EMPLOYEE MOBILITY BREAK DOWN

BY GERMAN A. HERNANDEZ LEIVA

EMPLOYEES ARE REMAINING IN CURRENT POSITION DESPITE HAVING LOW JOB SATISFACTION

- A trend often called the
‘Great Stay’
 1. Challenges the assumption
between job satisfaction and
retention
 2. Provides ‘Short-term’
stability and productivity
 3. *Uncertainty* plays a critical
role

DECLINING MOBILITY IS DRIVING RETENTION, NOT SATISFACTION

Economy
Uncertainty

Job Stability

Reduced Job
Opening

METHODOLOGY

**HR Analytics  Employee
Attrition & Performance**

Tools: Excel, Tableau

Filters:
Job Satisfaction = 1
Attrition = No

EMPLOYEE MOBILITY DECLINE SHARPLY WITHIN THE FIRST 5 YEARS

- Attrition drops significant after the first year
- Employees become less likely to leave over time
- Suggest reduced career mobility

MID-CAREER EMPLOYEES (30-45) DOMINATE RETENTION

- Ages 25-40 have the highest retention count
- Known as the Mid-Career Rut, ages 30-45 are where most employees feel 'stuck in their position'
- Employees starting their career are most likely to leave, then longer tenure for many reasons

LOW ATTRITION OCCURS AMONG MID-CAREER, HIGH-TENURE EMPLOYEES

- Higher attrition rate in the younger, early career employee then the older, longer tenure employees
- Stronger indication that retention increases as you stay longer in a company, despite low job satisfaction

BUSINESS IMPLICATION

Reduces Entry-
Level Hiring
Opportunities

Slows Internal
Career
Progression

Increase Risk of
Organizational
Stagnation

RECOMMENDATION

Track mobility alongside
retention metrics

Creates structural career
progression programs

Support mid-career
transition internally
